

# OILFIELD INDUSTRY

## *You already know that clean equipment lasts longer...*

*Oil drilling operations around the globe have discovered the value of keeping rigs and equipment clean. That's why pressure washers play such an integral role at your facility. Here are just a few of your most common cleaning tasks:*

- Wireline service
- Work-over rig servicing
- Drilling equipment
- Cooling towers
- Coil tubing service
- Contractor services
- Well testing services
- Fleet maintenance
- Down hole servicing
- Frac tank service
- Storage containers
- Drills, bits, pipes
- Heavy equipment
- Sludge removing gear

## *But how do you deal with all that wash water?*

*Dealing with the water that comes from pressure washing oil-laden equipment, rigs, pipes, etc. is one of the industry's stickiest problems. Oil, grease, benzene, toluene and other contaminants associated with oil drilling are considered environmentally hazardous.*

- It's against federal regulations to dump untreated, oil-laden wash water onto the ground, into a river, lake or ocean—or even into the storm drain.
- Local governments are quick to assess fines or surcharges for discharging oily water into the sewer.
- Hauling wastewater from a site is an alternative, but usually very expensive and doesn't totally eliminate the risk of liability.

*Only Water Maze has expertise in enough technologies to ensure the right solution for you!*

*Over for details*

Certified to appropriate UL safety standards

Certified to ISO-9001 manufacturing quality standards

# OILFIELD INDUSTRY

## *The solution is someone who understands your needs*

*Understanding your needs and identifying the correct solution takes years of providing support into the oilfield industry. Proper support will come in the form of:*

- In-field experience in developing on-site systems for dealing with the waste streams unique to the oil drilling industry;
- Wastewater tests and analyses that will precisely identify the contaminants in a waste stream;
- Wash rack designs and pad drawings for optimum management of cleaning water;
- Maintenance programs by local technicians to ensure you're satisfied with your system long after it has been installed.

Only one name in water cleaning systems provides these and more...

## *Water Maze has the expertise, equipment and field support*

*For nearly 20 years Water Maze has been providing solutions to the heavy equipment industry with hundreds of systems installed worldwide. Behind the Water Maze name you'll find:*

- Equipment and engineering support for a broad range of wastewater treatment technologies;
- North America's largest network of certified equipment dealers trained on how to install, operate, maintain—and train your staff;
- Expertise in environmental regulations, wastewater analysis, wash rack design and accessories for enhanced system effectiveness;
- Manufacturing quality (ISO-9001) and safety certification (ETL).

No other manufacturer provides the assurance of a water treatment solution for the oilfield industry like...
